

The opportunity. TechpioAsset is live and functional, but its data model, roles and screens were built for a single company. This redesign elevates it to a **multi-tenant, MSP-capable ITAM platform** in the class of ServiceNow, Freshservice, ManageEngine, Lansweeper and Microsoft Intune — serving SMEs, enterprises, MSPs, education, healthcare and government — while **preserving every existing capability**. No feature is removed; the platform is deepened and made enterprise-grade.

13roles across 3 authority planes

Availability / Condition /
Ownership**6**new/expanded modules: License,
Procurement, Inventory,
Maintenance, Discovery, Analytics**6**delivery phases, sequenced Now /
Next / Later

WHAT THE REDESIGN DELIVERS

- **Multi-tenant & MSP core** — hard tenant isolation (row-level security), cross-tenant operator plane, custom roles, SSO/SCIM/MFA.
- **Clear asset status** — the 18 confusing statuses become four independent dimensions, so “leased laptop, deployed, poor condition, in Warehouse-BLR” is finally answerable.
- **License Management** — seat pools with **hard, transactional seat-limit enforcement**: the over-limit assignment is *blocked*, not just reported, with alert + email + audit.
- **Procurement (source-to-pay)** — requisition → RFQ → PO → goods receipt → 3-way match, with budgets and approval thresholds.
- **Warehouse Inventory** — stock levels, reserved/available/quarantine, cycle counts, reorder points, stock-to-asset conversion.
- **Maintenance lifecycle** — corrective/preventive/predictive/AMC/warranty work orders, SLA timers, parts, e-signature, MTTR analytics.
- **Rich asset detail** — a 7-tab hardware profile (System, OS, Hardware, Software, M365, Warranty, Health) fed by Intune/agent discovery with source badges.
- **Role dashboards & mobile** — a “what needs me now” dashboard per role, and an **offline-first mobile field app** (scan, assign, count, sign) — not a shrunk web UI.

BUSINESS IMPACT

Outcome	How the redesign drives it
Cost control	License compliance & unused-seat reclamation, 3-way-match invoice control, depreciation/TCO, budget-vs-actual.
Risk & compliance	Immutable, tamper-evident audit trail (SOC 2 / ISO 27001 / GDPR-mapped), read-only Auditor, warranty/contract expiry governance.
Operational speed	Self-service requests, configurable approval workflows, automated onboarding/offboarding kits, discovery reconciliation.
Scale & new revenue	One codebase serves thousands of tenants; MSP operators manage a fleet — opening a multi-tenant SaaS/MSP go-to-market.

DELIVERY ROADMAP

NOW — Phases 0–1

Foundation: design system, tenancy model, normalized schema & audit spine; then core asset lifecycle, self-service, approvals and role dashboards.

NEXT — Phases 2–3

Procurement & Inventory (PR→PO→receipt→stock), then License Management with compliance, seat-limit enforcement and reclamation.

LATER — Phases 4–6

Discovery/Intune & hardware detail; Maintenance & field mobile; Analytics, integrations and the MSP control plane.

BOTTOM LINE A production-ready blueprint that turns a working single-company tool into a world-class, multi-tenant ITAM platform — hand it directly to designers, developers, QA and project managers. Every decision (roles, data, security, APIs, screens, lifecycles) is specified to implementation depth in the 86-page blueprint.
